Matt

That would have to come from Andy Gremos who I believe is out today.

Didn't EPA approve the installation of the original MW-27 years ago?

MW-27 was intended to monitor the shallow confined sand unit. Do you have boring logs showing the sand at the shallower depth?

Thank you,

Matt

Matt

The original MW-27 was screened at 6' to 11' feet below ground surface. MM's 27-R was screened from 6' to 17' below grade (i.e., 6 feet too deep).. The replacement for that well is to be screened at the original interval 6' to 11' below ground surface..

Unfortunately I don't have info on the original (MW-27?) well. Perhaps Andy can answer your question.

Thank you, Eric. Was the 2012 installation shallower than the original?

Good morning Matt,

Yes that is correct. MW-27R will be installed to the same depth as the 2012 installation (approximately 11 ft BGS).

Subject: Third Site ERH Water Confirmation Sampling

Matt,

Ramboll plans to conduct an ERH subsurface water confirmation sampling at Third Site on March 29, weather permitting. Per Section 1.5.2 of the McMillan-McGee Corp (M&M) April 2018 Remedial Design Report, the locations to be sampled include P-1 to P-3 and the Sump in the DNAPL Containment Area and the new MW-27R replacement well in the ATT area. M&M is scheduled to install the new MW-27R replacement well this Friday (March 22).

Please let me know if you have any questions.

Best Regards,

Andrew A Gremos LPG CHMM
